

# Planning for deployment

---

When you plan a deployment of IBM StoredIQ, evaluate several infrastructure considerations.

In addition to the information in this section, review the requirements detailed in the IBM Software Product Compatibility Reports (SPCR) tool at: [Software Product Compatibility Reports: StoredIQ 7.6](#)

If you plan to use IBM StoredIQ for Legal Identification and Collection to create and manage data boxes and data requests that are to be fulfilled by IBM StoredIQ, also check the system requirements for StoredIQ for Legal at: [Software Product Compatibility Reports: StoredIQ for Legal 2.0.3](#)

## **Generate customized reports with the SPCR tool**

Go to the page at Software Product Compatibility Reports to create a high-level report for supported operating systems, related software, hypervisors, and supported translations for any product. You can also create an in-depth report to get detailed system requirements, hardware requirements, and end of service information for each product. You can search for a product in all of the report types and reports are generated based on your query values.

The following report types are the most commonly generated reports from software product compatibility reports:
